

After surpassing the 2025 target of 19 GW already last August, PV capacity growth maintained a rapid pace in Turkey. As of February 16, solar power amounted to 20.4 GW or 39.3% more than one year ...

Analysts project the unlicensed solar segment to reach 40 GW by 2030, provided grid infrastructure keeps pace. Turkey's solar irradiance averages 1,500-1,700 kWh/m<sup>2</sup>; annually, ...

Solar power is a growing part of renewable energy in the country, with almost 25 gigawatts (GW) of solar panels in 2025, of which 22 GW is commercial and industry rather than traditional power companies ...

The government's ambitious targets-- increasing renewables to 38.8% of total generation by 2030, and reaching nearly 120 GW of combined solar and wind capacity by 2035 --have attracted strong local...

This study examines the recent development of solar and wind energy capacities in Turkey in the context of current renewable energy targets and strategies.

For foreign investors looking to enter the solar energy sector in Turkey, the Renewable Energy Financing Agreement signed between the World Bank and Turkey offers highly attractive opportunities.

The rise of distributed renewable energy (DRE) technologies, like solar panels on rooftops and small solar farms, is creating new opportunities that weren't possible ten years ago.

The main objective of this study is to help strategic and systematic evaluation of the solar energy resource potential affecting large and small-scale solar power projects in Turkey.

Turkey's rapid rise in solar deployment has been largely attributed to the installation of unlicensed solar power plants for self consumption in the commercial and industrial sector.

This significant milestone, reported by energy thinktank Ember, not only demonstrates rapid and sustained growth but also means Turkey has successfully exceeded its own national solar ...
