

## Base station wind power supply is not displayed

These problems have been reported mainly with reference to small-scale autonomous systems when significant wind power (>100 kW) is connected to a low voltage grid.

By the time you've set the time, date and altitude on the console it should have picked up external temp, humidity and wind data, if the LED is flashing. My experience with the WMR100 and ...

If your AcuRite weather station displays incorrect temperature or wind speed, first ensure the sensor batteries are fresh and properly installed. Check that the sensor and display unit maintain a strong ...

The "wind test cable" is a small device that you get from Davis (or make yourself) that plugs into the anemometer socket on the ISS, and has a pushbutton that you can use to see if the ...

The fix is simple: just power down the console (including removing one battery, if fitted), wait a few moments and then power up the console again. Most times this will cure the problem. (For ...

You receive a "location not verified" error on your mobile app when the Proof of Location (PoL) mechanism flags your weather station because the location reported by its GPS receiver (s) is ...

Wind power has no effect on base load. However, since base load providers can not be ramped down, if wind turbines produce power when there is no or little peak load, the extra electricity has to be ...

Remove the power supply and the batteries, and then restore the power to make the console work normally again. To avoid this problem, always use a surge protector when powering ...

If you still do not see wind and/or temperature, please try a factory restart on the station. Hold the ALERTS and RAIN buttons together for 5 seconds or until the station resets.

Is the problem that all your weather data, which used to be displayed on a Vantage Vue or Vantage Pro console is no longer displayed there? If so, make sure the console has fresh ...

My problem was that my Vantage vue Console showed a wind speed of 0.0 all the time, even if the anemometer (and it's axle) was turning. The console diagnostic screen showed that the ...

There are steps below that will assist you in getting the sensor to reconnect with the base station and in most instances will rectify the issue without any further steps needed.
