

# Battery shortage coupled with explosive demand for energy storage

Why are Chinese battery cell manufacturers booming?

A surge in global demand for energy storage solutions is fueling a boom for Chinese battery cell manufacturers, driven by the worldwide shift toward renewable energy and accelerated by government policies, said Ye Mingyuan, an energy storage analyst at Shanghai Metals Market, an industry monitor.

Does battery supply exceed demand?

Although battery supply may exceed demand at the global level, the picture is more nuanced and varied by region. Some countries have excess capacity--meaning more than enough to satisfy local demand--while others rely on imports to alleviate local shortages.

Why are lithium-ion batteries used in space exploration?

Lithium-ion batteries play a crucial role in providing power for spacecraft and habitats during these extended missions. The energy density of lithium-ion batteries used in space exploration can exceed 200 Wh/kg, facilitating efficient energy storage for the demanding requirements of deep-space missions. 5.4. Grid energy storage

Will a global battery oversupply persist?

This trend, combined with lower-than-expected EV demand, has led to a global battery oversupply. Some analysts are concerned that the imbalance may persist, especially if battery incumbents maintain their high output and new start-ups continue to enter the mix.

The demand for critical minerals in batteries is set to rise significantly, requiring investments in new projects, recycling and financial tools for sustainability.

The current lithium shortage in China may thus accelerate both material efficiency improvements and circular economy approaches within the battery industry. Navigating the New ...

Orders for small-format 100 Ah cells now stretch into early 2026, with prices up more than 20% as demand outpaces capacity despite aggressive expansion by Chinese battery majors.

Experts believe that the revised policy has led to a surge in demand for energy storage systems, particularly from projects rushing to meet the pre-June 1 deadline. This demand spike has placed ...

In 2025, the overseas energy storage market experienced explosive growth in demand, leading to a surge in orders for domestic energy storage cell companies. "Hard to schedule due to price increase" ...

The "battery cell shortage" underscores the critical role of Chinese manufacturers in the global energy storage landscape and highlights the challenges of scaling up production to meet ...

As the global shift toward renewable energy accelerates, new energy storage systems (ESS) have become a

# Battery shortage coupled with explosive demand for energy storage

critical foundation for stabilizing green power grids. In the second half of 2025, ...

Before we examined regional trends for batteries, we first reviewed the global market to understand the overall dynamics. Our analysis relied on a bottom-up model that reviewed projected ...

Lithium-ion batteries are pivotal in modern energy storage, driving advancements in consumer electronics, electric vehicles (EVs), and grid energy storage. This review explores the ...
