

Can solar power generation exceed coal power

For the first time ever, renewables generated more power than coal as solar and wind outpaced global demand growth in early 2025.

Renewable energy overtook coal as the world's leading source of electricity in the first half of this year - a historic first, according to new data from the global energy think tank Ember.

For the first time on record, renewable energy from solar and wind produced more electricity than coal in the first half of 2025. For the first time ever, renewable energy has overtaken ...

According to a report by climate think tank Ember, wind and solar power together outpaced coal generation in the first half of 2025, driven largely by record solar expansion and steady...

Global electricity generation from solar will quadruple by 2030 and help to push coal power into reverse, according to Carbon Brief analysis of data from the International Energy Agency ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal,...

The world's wind and solar farms have generated more electricity than coal plants for the first time this year, marking a turning point for the global power system, according to research.

Coal may yet hold off wind and solar with a strong five months to close 2024. But renewables are likely to overtake the former king of the power sector sooner rather than later.

For the first time on record, renewable energy generated more electricity for the planet than coal, a new report says.

Clean power has reached a critical tipping point, with solar and wind now generating more electricity than coal globally. The combined output from global wind and solar power has, for the first ...

Can solar power generation exceed coal power
