

The proposed method is based on the use of concentrating solar power plants with high thermal capacities to dry calcium hydroxide and provide consumers with the resulting calcium oxide.

Abstract: Thermal energy storage is an essential technology for improving the utilization rate of solar energy and the energy efficiency of industrial processes. Heat storage and release by...

Concentrated solar power (CSP) integrated with calcium looping (CaL) technology has garnered significant interest as a solution to mitigate the issue of intermittency in solar power ...

This study proposes a solar thermal power generation system integrated with a CaO/Ca (OH) 2 thermochemical energy storage system for cross-seasonal energy storage.

In order to explore the feasibility of steel slag-derived CaO-based materials for direct solar-driven TCES, we fabricated CaO-based composite materials using steel slag, focusing on ...

This work explores the use of limestone and dolomite for energy storage in concd. solar power (CSP) plants by means of the calcium looping (CaL) process based on the multicycle ...

To overcome the loss in porosity problem, an efficient CaO-based material for thermal energy storage was synthesized using bamboo fiber as the biotemplate.

Recently, scholars have conducted lots of research on CaO/CaCO 3 heat storage, continuously optimizing the integrated process of CaO/CaCO 3 heat storage and CSP power generation to ...

To assess the impact of the novel material on the solar power system, the CSP-CaL system using CaO-ZnO-Na₂ SO₄ composites was built in this work. Firstly, an energy analysis was ...

This study focuses on methods to increase the photo-to-thermal energy conversion efficiency while maintaining the excellent thermal-to-chemical energy conversion characteristics of ...

Cao-style solar thermal power generation
