

# China's photovoltaic power generation and wind power

In 2023, China's new energy investment grew rapidly, the investment in solar PV exceeded 670 billion CNY, while the investment in wind power exceeded 380 billion CNY.

According to the 2025-2026 National Power Supply and Demand Analysis and Forecast Report released by the China Electricity Council on Monday, the combined installed capacity of wind ...

To meet China's goal of carbon neutrality by 2060, substantial investment in upgrading power systems needs to be made to optimize the deployment of new photovoltaic and wind power...

This review further proposes a strategic roadmap for sustainable development, emphasizing the integrated deployment of wind and solar as the dominant sources of power generation.

Wind and solar alone added 366 terawatt-hours of generation capacity. China and India together have driven more than 90% of the increase in global CO2 emissions from all sources ...

Although there is fast growth in power storage capacity, China's grid heavily relies on coal power to mitigate the intermittency of renewables, casting a shadow on wind and solar's achievements.

China achieved a new milestone in its energy transition, with wind and solar power together generating a quarter (26%) of the country's electricity in April 2025, the highest monthly ...

(Yicai) Dec. 16 -- China will add more than 200 million kilowatts of new wind and photovoltaic power generation capacity next year as it accelerates the green and low-carbon transformation of its energy ...

In CY2024, China hit a new record of annual net new capacity added to the grid at 429GW, a 21% y-o-y increase. Of this, wind and solar power combined capacity accounted for 83% at 356.5GW, dwarfing ...

Wind and solar combined are projected to account for about half of China's total installed power capacity
