

Cooperation on bidirectional charging of folding containers in Western Europe

This non-binding Memorandum of Understanding ("MoU") is agreed between CharIN and Task 53 - Interoperability of Bidirectional Charging (INBID). To this end the parties agree as follows:

Is bidirectional charging permitted in Europe? Find out here what challenges still exist and when bidirectional charging is coming.

At least 30% of all newly registered electric vehicles in Europe should support bidirectional charging. Communication between vehicles, charging stations, and power grids should be ...

The aim of the project was to optimise the geographical and temporal distribution of surplus energy from renewable energy systems (RE systems) using bi-directional electric vehicles (BEVs) with intelligent ...

A newly released report by smartEn and DNV, named "V2X Enablers and Barriers: Assessment of the regulatory framework of bidirectional EV charging in Europe", analyses the EU and UK electric ...

By addressing these factors, the paper aims to provide an initial roadmap for realizing the practical benefits of bidirectional charging technology in Dresden's urban context, contributing to the city's ...

This joint report represents the culmination of extensive collaboration over the past months, aimed at building the technical foundation and securing industry consensus necessary to create a level ...

In order to leverage the identified potential, cooperation is required between the various players along the entire value chain, from energy supply to the automotive industry.

Bidirectional charging (BiDi) could thus achieve a technological and economic breakthrough in Europe but it requires clear regulatory framework conditions. Without these, the ...

Bi-directional charging is still in its infancy, but the technology is available to equip both the charging stations and the EVs themselves to support smarter power distribution in cities as well as enable a ...
