

# Distribution of solar power generation bases in Europe

In absolute terms, the EU is expected to add 401 GW new solar between 2024 and 2028, which will bring up the total installed PV capacity to 671 GW by the end of 2028, according to the Medium ...

Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy. Its accelerated deployment contributes to reducing the EU's ...

Solarpower Europe launched a new EU27 country level solar target database. It allows to discover how much solar each EU country has already installed and to compare each country's ...

OverviewEU solar energy strategyPhotovoltaic solar powerConcentrated solar powerSolar thermalOrganisationsSee alsoSolar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). In 2010, the EUR2.6 billion European solar heating sectors consisted of small and medium-sized businesses, generated 17.3 terawatt-hours (TWh) of energy, employed 33,500 workers, and created one new job for every 80 kW of added capacity.

Find the most up-to-date statistics about the solar photovoltaic industry in Europe

The highest solar potential is concentrated in the Iberian Peninsula, the lowlands of Romania, and parts of Central-Eastern Europe, all of which face economic challenges but are ...

Europe's solar sector has maintained its impressive momentum into 2025, with new data confirming record-breaking installation figures across the continent.

European solar power continues to grow, setting a new historical record in 2024. However, the rapid momentum seen at the beginning of the decade has started to wane.

This paper aims to understand the process of regional energy transition in Europe, focusing on the two major sources of renewable energy generation: wind and photovoltaic energy, ...

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

EU solar power output grew 21.7% (i.e., by 54 terawatt-hours, TWh) in 2024, expanding from 9.3% to 11.1% of total generation - a trend mostly driven by new capacity additions. Solar plants ...
