

Dominica energy conservation

What is the Dominican energy project?

This project is designed to support the Commonwealth of Dominica in developing and integrating clean, sustainable and low-cost energy. Through this \$38.5 million project, a new robust transmission network will be built to withstand natural hazards, strengthening Dominica's electricity grid.

Does Dominica have a national energy plan?

Dominica drafted a National Energy Plan in 2011 and revised it in 2014 to state its objective of using sustainable and indigenous resources to make electricity generation on the island self-sufficient by 2020.

How is Dominica transforming geothermal energy?

“Dominica is making significant strides in geothermal energy, with innovative investments to deliver clean, low-cost electricity to its citizens and thereafter, the Eastern Caribbean. With support from the World Bank and the Government of Canada, we are building a resilient network for geothermal energy transmission.

How has the government of Dominica made provision for Conservation and sustainable use?

The Government of Dominica has made provision for the conservation and sustainable use of its biological resources through the development and implementation of several different legal instruments (Acts, Bills, and Policies). Because these instruments were developed at different times, the reality to which they speak differs.
