

Energy Storage System Outlook

The IEA's flagship World Energy Outlook (WEO) is the most authoritative source of global energy analysis and projections. Updated annually to reflect the latest energy data, technology and market ...

In this report, our lawyers outline key developments and emerging trends that will shape the energy storage market in 2025 and beyond.

For years, long duration energy storage (LDES) has been framed as a strategic option: something promising, something emerging, something we'd get to once the "real work" of renewables ...

While power demand is expected to continue to see strong growth in 2025 and beyond, the growth rate of low-carbon energy sources is now close to covering the entire demand increase. ...

The global energy storage market is poised to hit new heights yet again in 2025. Despite policy changes and uncertainty in the world's two largest markets, the US and China, the sector ...

Despite an increase in battery metal costs, global average prices for battery storage systems continued to tumble in 2025.

February 3 - Demand for battery storage is rising on the back of massive investment in solar and wind power, wider electrification efforts and a need to strengthen grid reliability.

US energy storage five-year market outlook Storage installations will grow just under 30% in 2024, but between 2025 and 2028 an annual average growth rate of 10% is expected as early-stage ...

Regional dynamics demonstrate energy storage markets reaching maturity. Explore this evolution and our analysis of the key global themes to watch in the year ahead.

Developing energy storage has become a global consensus. It was announced at COP29 in late 2024 that global storage capacity will increase to 1,500 GW by 2030, more than six times the ...
