

High-voltage photovoltaic container used in UK research stations

Research in solar technology has potential to reduce the levelised cost of electricity to the consumer, meet UK energy demands, and achieve environmental targets as part of a balanced, ...

[Datasheet \(PDF\)](#) [More projects...](#)

These modular solutions combine solar panels with battery storage in weatherproof shipping containers, offering plug-and-play functionality for projects ranging from 100kW to 5MW capacity.

In conjunction with Power Roll Ltd, EPMM have developed flexible, back-contact perovskite-based photovoltaic devices utilising a new, patented V-groove architecture.

Funded by the Engineering and Physical Sciences Research Council (£2.6M, EP/X030245/1), the National Facility for High Resolution Cathodoluminescence (CL) Analysis provides unique ...

The innovative and mobile solar container contains 200 photovoltaic modules with a maximum nominal output of 134 kWp and, thanks to the lightweight and environmentally friendly aluminum rail system, ...

In this paper, the photovoltaic (PV) power generation system of a grassland ecohydrological field scientific observation and research station was taken as the research object. ...

The research programme draws on the collective expertise and facilities that exist within the consortia, and will address questions that span the variety of energy storage technologies being developed - ...

With our new photovoltaic modules you can turn your 20" portable cabins and sanitary cabins from our CLASSIC Line and PLUS Line range into a cost-efficient and sustainable space solution.

In this paper, the photovoltaic (PV) power generation system of a grassland ecohydrological field scientific observation and research station was taken as the research object.
