

# How come there is no wind for wind power generation

Once a turbine is going, it can take hours to slow back down, and that could explain why they are turning without wind. They could also be drawing power from the grid to rotate the blades during cold periods of the ...

For more than a decade I have been asking Energy Ministers how do we keep the lights on when the wind does not blow? There has been an almost universal enthusiasm to finance more windfarms. We ...

Apart from environmental impacts, wind energy generation faces issues in energy and financial sustainability, such as the wind power fluctuation, technology lagging and use of fixed feed-in tariff contracts that do not ...

How do we ensure energy is available at all times - even when the sun doesn't shine and the wind doesn't blow. Read the expert take on this pertinent question

However, some people wonder how wind turbines keep generating electricity when there is no wind. This article will explain how this is possible using innovative ideas and advanced technologies.

Wind power or wind energy is a form of renewable energy that harnesses the power of the wind to generate electricity. It involves using wind turbines to convert the turning motion of blades, pushed by moving ...

Put simply, it makes it a lot harder to generate wind power when there is little to no wind. Wind slowing and wind droughts can cause problems. According to The Conversation, SSE, a U.K.-based power ...

Once a turbine is going, it can take hours to slow back down, and ...

Curious about how wind turbines work when there's no wind? This article explains how turbines generate electricity, even when it's not windy outside!

No, wind turbines do not generate electricity when it's not windy. They also don't generate electricity when the wind speed drops below what's called the "cut-in-speed".

Sometimes when you see a wind turbine that is not rotating, it is not because there is no wind - it is because the turbine has been deliberately shut down. There are a number of reasons why a turbine would ...
