

How long is the lease term for photovoltaic panels

How long does a solar lease last?

Your lease will also have a fixed term length, typically 20 to 25 years. In most cases, your solar company will allow you to buy the system outright at its market value price at the end of your contract, but you'll likely pay additional fees--which means it's not the best financial choice for owning your solar panel system.

What happens at the end of a solar panel lease?

Unveiling the Truth At the end of a solar panel lease, you generally have a few options depending on your contract: you can choose to buy the solar system at a reduced price, extend the lease, or have the leasing company remove the system. The specific terms and costs will vary based on your lease agreement and the policies of the leasing company.

Are solar panels a lease or a PPA?

Maintenance: If you choose a solar lease or PPA, the leasing company owns the solar panel system and typically offers a service program to cover any maintenance issues that arise during the lease term. On the other hand, if you take out a solar loan to purchase your system, you'll be responsible for its maintenance.

What is a solar lease?

You can think of a solar lease like a car lease: It's a form of third-party ownership (TPO) where you don't own the product that you're paying for. Under a solar lease, a third-party owner (typically a solar company) installs solar panels on your property and then sells you the electricity produced at a predetermined monthly rate.

During the term of the contract, you're entitled to use all the power the system produces. You'll probably buy less power from your electricity utility. If the company is promising electric bill ...
