

Is solar power generation good now

In recent years, solar power has proven to be a key solution for reducing dependence on fossil fuels and mitigating climate change. As costs decrease and efficiency increase, the future of ...

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to power the planet on sunshine. Is solar power going to take...

Solar power became the most affordable energy source between 2021 and 2025, with costs dropping below coal and natural gas in most regions.

2024 was a record year for solar deployment as companies raced to cash in on lucrative tax treatments and subsidies offered by the Biden administration. Thirty-seven gigawatts of new ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Solar claimed a whopping 58% of all new electricity-generating capacity added in 2024, leaving wind (12%) and natural gas (25%) in the dust. Growth skyrocketed 51% year-over-year, ...

Explore the advantages and disadvantages of solar energy, its sustainability, and environmental impact. Learn how it promotes energy independence despite some drawbacks.

Globally, renewable power capacity is projected to increase almost 4 600 GW between 2025 and 2030 - double the deployment of the previous five years (2019-2024). Growth in utility-scale and distributed ...

The US clean electricity transition continued as wind and solar generated more than coal for the first time. Electricity demand growth sped up and solar generation rose more quickly than gas ...

As of yesterday's data release by the Energy Information Administration (EIA), which covers the first nine months of 2025, total electricity demand has risen by 2.3 percent. That ...

Is solar power generation good now
