

Microgrid providers can play a critical role in derisking transit fleet electrification, ensuring timely supplies of affordable, reliable electricity for battery electric buses.

This paper introduces the design, modeling and simulating of a micro-grid system consisting of 10 buses operating at medium voltage to leverage distributed generators, efficient ...

The Santa Clara Valley Transportation Authority broke ground on a first-of-its-kind project to charge dozens of electric buses using on-site solar power and battery storage.

Abstract-The country's growing population puts additional pressure on power grids for electricity. The integration of Distributed Energy Resources (DER) has eme.

Abstract--A microgrid is a smaller electric network that can operate independently of a main power grid. An islanded microgrid is typically energized by a generator or inverter and the closing of its ...

The Cerone Microgrid Project pairs bus charging infrastructure with solar panels and a microgrid which stores electricity onsite in large batteries and can keep buses charged in the event of ...

Find a long-term partner to design, build, own, operate, and maintain an on-site microgrid, charging infrastructure, and other equipment to ensure uninterrupted transit bus services.

In this study, an FCE bus comprising a SOFC fuel cell stack and a battery is modeled as a Mobile Microgrid (MoMG) using MATLAB/Simulink to deliver mobile electrical energy support to ...

The Cerone Microgrid Project pairs bus charging infrastructure with solar panels and a microgrid, which stores electricity onsite in large batteries and can keep buses accused in the event ...
