

Microgrid cable impedance simulation brand

Always at the cusp of innovation, our solutions test the systems required for any level of microgrid control, whether through real-time or accelerated simulation.

Test your power systems smarter with microgrid simulation, grid emulation, and inverter testing--real-time validation solutions designed by Impedyme.

Impedyme's CHP Series Grid Emulator delivers scalable PHIL testing and simulation up to 1.3 MW for renewable integration and IEEE 1547 compliance.

Test wide range of grid-tied products, low to high. Simultaneous AC and DC operation per phase AND automatic switching of outputs provides extensive flexibility. Embedded Real-Time Remote Control ...

The ZAI-RLC series microgrid cable impedance simulation system consists of cable line simulation impedance and overhead line simulation impedance. It can accurately simulate cable impedance ...

The microgrid test bench is a ready-to-use configuration of control testing equipment for power electronics. It combines low-voltage experimental equipment from imperix with Hardware-in-the-Loop ...

EMTP#174; is the most complete and technically advanced software for simulation and analysis of power systems. It is known to be the fastest, the most accurate and the most numerically stable time ...

The microgrid load developed and produced by Shenzhen Welchwa Electronics Co., Ltd. is a line analog impedance load device that can be used as an analog line component in the laboratory instead of a ...

Professional-grade simulation platform for designing, analyzing, and optimizing complex microgrid systems with renewable energy integration, energy storage, and smart grid technologies.
