

Is building a microgrid hybrid system in Baghdad more economical than Rabat?

The optimization performed using a smart and efficient algorithm called the PSO algorithm. The results indicate that the building of a microgrid hybrid system in Baghdad is more economical compared to Rabat with the same corresponding components of renewable energies and load capacity.

What is a microgrid control system?

The proposed system shows a novel microgrid (MG) control system that employs the Internet. Recently, in an MG, a person is employed to record for measuring parameters like voltage, current, temperature, and humidity of the transformer and related equipment that influences the transformer along with causing parallax error.

How to design a hybrid microgrid?

The design of hybrid microgrid configuration depends on the meteorological data and the load. Hybrid microgrid systems are composed of traditional or/and renewable energy sources, the sizing problems are solved using different methods, as stochastic algorithms, software tools, and the classical one. However,

What is the pre-feasibility of a microgrid hybrid system?

The pre-feasibility of the project is a necessary step to validate the implementation of any project. Microgrid hybrid systems (consisting of PV, wind turbines, diesel generators, and battery storage) were examined in two countries to determine their optimal economic and size.
