

In this article, we examine the case study of renewable energy development in Myanmar to better understand the factors that influence renewable energy development and deployment in a developing country context.

As of 2021, Myanmar is not yet a member of the International Renewable Energy Agency (IRENA), an international organization that facilitates cooperation and promotes the adoption of renewable energy; joining ...

Demand for energy has been growing fast, in parallel with the ASEAN (Association of Southeast Asian Nations) member's economy, and solar energy is competing against a variety of conventional, as well as alternative ...

Myanmar is currently implementing 11 hybrid and solar power generation projects, according to Admiral Tin Aung San, Chairman of the Electric Power and Energy Development Commission.

According to projections from Myanmar's Ministry of Electricity and Energy (MOEE), the first plants are expected to come online in early 2026, with the full 440 MW contribution anticipated by the middle ...

To meet Myanmar's renewable energy targets, it is crucial to invest in solar energy research and development, which can advance solar energy exploitation and utilization in Myanmar.

This study, conducted from January 2023 to August 2024, examines the strategic development of photovoltaic (PV) solar energy in Myanmar through Grounded Theory and SWOT analysis.

This paper aims to describe the high potential of solar energy, current situation of solar energy implementations and the important of Renewable Energy of Myanmar respectively. This paper is also intends to know good ...

This study employs a qualitative research design, combining Grounded Theory and SWOT analysis to explore the strategic development of photovoltaic (PV) solar energy in Myanmar.
