

No loan required for solar photovoltaic panels

Are solar loans a good option?

While solar loans are generally the most cost-effective choice for homeowners, we'll walk you through the benefits and drawbacks of all of your zero-financing options, and which one is likely to make the most sense for your personal financial situation. What are your zero-down solar options?

Should you take out a solar loan?

For most people, taking out a solar loan instead of a lease or PPA agreement will usually offer the most financial upside because you own your solar panels at the end of your loan term. Plus, you won't experience annual electricity rate increases which can cancel out much of your solar savings.

Do solar loans come with a zero-down option?

Most solar loans come with a zero-down option. The amount you pay monthly depends on how much your system costs to install, your interest rate, your loan term, and the type of loan you choose, but your monthly loan payments will still cost less than your previous electricity bill, providing you with immediate savings.

How do I go solar without upfront costs?

There are three main ways to go solar without any upfront costs - solar loans, and solar leases or power purchase agreements, also known as PPAs. Solar energy systems are an expensive investment, which is why about 85% of all solar system installations are financed. The zero-down option with the most financial upside is a solar loan.
