Renewable energy is energy from sources that are naturally replenishing but flow-limited; renewable resources are virtually inexhaustible, but they are limited by the availability of the resources.

Limitless renewable energy would offer tantalising benefits: emissions-free heating, greener fertiliser and electric transport. But overcoming the obstacles will not be easy.

With concerns about climate change and environmental degradation on the rise, it's no wonder that renewable energy sources like solar, wind, and hydroelectric power are gaining popularity. In this ...
