

Batteries stand at the heart of the global transition towards a low-carbon society. To meet the ambitious goals of sustainable energy, Europe must accelerate innovation in materials discovery, interface ...

Guangdong Wevio New Energy Co., Ltd., with its profound expertise in battery design technology and industry oriented research and development, provides customized and sustainable innovative ...

The Rhinoceros project aims to develop sustainable technologies for reusing and recycling electric vehicle batteries and stationary systems. The project will involve the realisation of an ...

The project will be developed at Rome Fiumicino International airport and the energy stored will cover evening peak-demand, while also providing flexibility services to the grid.

The company continues to increase research and development investment, introduce advanced technologies from both domestic and foreign sources, and promote product upgrades and ...

ROME's core competency is in research and development to design, refine, and commercialize next-generation micro-energy solutions using tritium to transform what is possible with today's electronic ...

As part of the PIONEER project, a commercial use case for 2nd-life batteries in combination with a 30 MWp PV system to power the 'Leonardo da Vinci' international airport in Rome Fiumicino will be ...

Dr. Jeff Dahn, an acclaimed Dal researcher whose work has led to the development of batteries with a 50-year lifespan, received a major international science prize in Rome, Italy this ...

Italy's largest energy storage system based on used batteries for electric vehicles was inaugurated on Tuesday at Rome's Fiumicino airport to help it reduce carbon emissions.

NREL focuses on creative answers to clean energy challenges, from breakthroughs in fundamental science to new clean technologies to integrated energy systems.

Rome battery research and development
