

Solar Photovoltaic Power Generation in the Next Three Years

The past decade has seen exceptional progress in solar photovoltaics. Over 700 gigawatts of solar photovoltaic modules were installed in 2025, more than ten times the 56 gigawatts ...

Explore the future of solar in 2025--key trends, new tech, and policies driving global clean energy growth.

Utility-scale solar installations decreased 28% year-over-year and 33% quarter-over-quarter with 5.7 GWdc installed. In Texas, the largest utility-scale solar market, average power prices ...

The United States is poised to see solar power lead new electricity generation capacity additions through at least 2028, according to industry data and forecasts. New capacity from solar ...

According to the latest Short-Term Energy Outlook from the U.S. Energy Information Administration (EIA), solar power generation in the U.S. is projected to skyrocket by 75% from 163 ...

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

Growth in utility-scale and distributed solar PV more than doubles, representing nearly 80% of worldwide renewable electricity capacity expansion. Low module costs, relatively efficient permitting processes ...

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to power the planet on sunshine. Is solar power going to take...

o Utility-scale solar (including PV and CSP technologies) and C& I PV electricity production dropped by 46% from its summer peak (July 2024) to its winter low (December 2024), ...

With China implementing major changes to its solar market design this year, a temporary dip in global growth in 2026 appears very likely. Meanwhile, other regions are falling behind, ...
