

Solar Street Light Support Pole

What is a solar street light pole?

A solar street light pole is a type of light pole designed to support solar-powered street lights. Aluminum is a common material used for making solar street light poles, which are generally more than 3 meters high and come in two varieties: aluminum alloy spinning light poles and casting light poles.

Are street light poles concrete?

Today, you can hardly see concrete poles used for street lights. The majority of street light poles are made of steel or aluminum. Steel solar street light poles and aluminum poles differ in many properties, involving stiffness, strength-to-weight ratio, corrosion resistance, maximum height, processing and price.

How do solar street lights work?

In prevalent all-in-one solar street lights, the LED lighting, solar panel and battery are integrated into one unified module, which means the arm carries all the parts for the light. In contrast, the lighting module and solar panel are separated in older generations of street lights, including split solar street lights and all-in-two lights.

What are solar street lights used for?

Through several decades of development, the applications of solar street lights get much broadened, not merely limited to the transportation industry. Many street lights are tailor-made for commercial and residential uses, as you can see the installations along the streets within factory parks or near garden fences.

Conclusion The best pole for solar street lights depends on several factors, including the material, height, wind load rating, and design. Galvanized steel, aluminum, and stainless steel are ...
