

Solar battery cabinet lithium battery pack placed vertically

Can a lithium battery be mounted vertically?

For the right type of lithium battery, this is not only possible but is often the intended and ideal orientation. Absolutely. Sealed lithium-ion batteries, and particularly the LFP (Lithium Iron Phosphate) technology found in the majority of modern wall-mounted battery systems, are perfectly suited for vertical mounting.

What is a wall mounted battery?

Engineered for Versatility: Manufacturers of wall-mounted batteries design their products with vertical installation as the primary use case. The internal components are secured to handle this orientation, and the mounting hardware and enclosure are specifically engineered for a safe and secure wall attachment.

Should a battery be mounted on a wall?

Out of the Way and Safer: Mounting the battery on a wall can keep it away from potential bumps, spills, or flooding on the floor, and out of the reach of children or pets. At Gycx Solar, we specialize in designing and installing these elegant wall-mounted battery solutions.

Are LFP batteries good for stationary storage?

LFP's Robustness: Lithium Iron Phosphate (LFP 1.) batteries, the gold standard for stationary storage like our wall-mounted batteries, are very robust and handle deep discharging much better than other lithium chemistries. This is why they are often warranted for high DoD (e.g., 90% or even 100%).
