

Solar power generation and drinking water system in pastoral areas

This research introduces a novel method that combines smart water management technologies with a photovoltaic pumping system to provide a sustainable domestic water supply to ...

In pastoral and semi-pastoral areas where there is no electric grid and diesel-powered generators are unaffordable, we invest in water supply systems that use solar power which is sustainable and offers ...

production community ownership and water infrastructure stood out as challenges. Water sector technology stood out as opportu water access for pastoral communities in Isiolo County. The findings ...

This document gives detailed instruction of all technical topics pertinent to the design and installation of solar powered water systems within the rural water supply context.

Powered by two solar panels that generate the electricity to pump water sustainably from the reservoir, this installation means that he and his community no longer have to laboriously collect ...

The northern remote pastoral areas are rich in wind energy and solar energy resources which has become the main method to solve the safety problem of drinking water in pastoral and...

This review is the first to systematically evaluate external support for solar-powered systems from multiple regions and implementing organizations. We reviewed solar-powered water ...

This paper proposed a standalone solar/wind/micro-hydro hybrid power generation system to electrify Ethiopian remote areas that are far from the national utility grid.

A remote-controlled hybrid wind-solar powered water extraction system is proposed to address the problem of reliable drinking water supplies for livestock and farming populations in ...

The dealer will combine the information you provide about your water requirements and livestock operation with the information on solar energy available in your area, and help you select the solar ...
