

# Solar power generation in the western desert

Concentrated solar power plants (CSPs) are gaining momentum due to their potential of power generation throughout the day for base load applications in the desert regions with extremely high direct ...

Here we use state-of-the-art Earth system model simulations to investigate how large photovoltaic solar farms in the Sahara Desert could impact the global cloud cover and solar generation...

As utility-scale solar farms spread across desert regions, scientists are developing new ways to understand how these massive energy installations interact with fragile desert ecosystems.

This article explores the benefits of desert-based solar and some potential challenges and solutions associated with rolling out large-scale solar farms in the desert.

This assessment focused on a region experiencing intense development pressure, the western Mojave Desert, to highlight how facilities could be sited to have lower impact on the conservation values of the broader ...

Engineers in a familiar continent are looking to transform what would have been called a dead zone into a clean-energy utopia with the help of 20 million solar panels. In this article, we will examine why ...

The Ivanpah Solar Electric Generating System is a concentrated solar thermal plant located in the Mojave Desert at the base of Clark Mountain in California, across the state line from Primm, Nevada.

The project supplies power to California utilities, the city of San Jose, the Clean Power Alliance, and several corporations. This corner of the desert is a hotbed not only for solar but also for wind energy.

Transforming deserts into renewable energy hubs, particularly insufficient infrastructure in remote regions, comes with challenges. However, cutting-edge technologies, such as artificial intelligence (AI), address this ...

Summary: This presentation describes research on soil and plant communities impacted by utility-scale solar energy (USSE) development in the Desert Southwest, USA.
