

The power generation blades are 75 meters long

What is the world's longest wind turbine blade?

'quantum blade' by produced by siemens is the world's longest wind turbine blade all images © siemens AG,munich/berlin

How big is a Siemens turbine blade?

The diameter of the blade is 154 metres and it has a sweep of 18,600 square metres - the equivalent of nearly two and half football fields. The blades are designed to be part of the latest turbine generation, the Siemens 6.0-154 turbine, which have a six megawatt capacity.

How many m blades does a Siemens offshore wind turbine have?

The 75 m blades will be used on Siemens' 6 MW (SWT-6.0-154) offshore wind turbine. This turbine can also be equipped with a 120 m rotor, standard equipment for the Siemens 3.6 MW offshore turbine, to allow the 6 MW turbine to be installed in locations where air traffic regulations dictate a maximum tip height of 150 m.

How are Siemens 75 m blades made?

The 75 m blades are manufactured using Siemens patented IntegralBlade® technology. The blades are made of glass reinforced epoxy resin and manufactured in one piece using a closed mould process. The glass fibre reinforcement is laid out in a special moulding arrangement with a closed outer mould and an expanding inner mould.

The 75 meter long B75 Quantum Blade demonstrates tremendous strength at a low weight and, thanks to its unique airfoils, offers superior performance at a wide range of wind speeds. ...

Siemens Energy in June announced it had produced the first batch of its new B75 Quantum wind turbine rotor blades, fiberglass components 75 meters (m) in length that were cast in ...

the "quantum blade" measures 75 meters in length (154 meter rotor diameter) and has a six megawatt capacity, giving it a swept area of 18 600 square meters, almost the length of two and a ...

Siemens has produced the first batch of its new 75 m long wind turbine rotor blades, which it claims are the world's longest. We take a look.

The Vestas-V236, the longest wind turbine blade on record, is 115.5 meters long. Siemens Gamesa's SG 14-222 DD is 108 meters long, and the GE Halidade-X was the first wind ...

Siemens has unveiled the world's longest turbine blade, a 75-metre concept devised for its next-generation 6MW offshore machine. The B75 Quantum blade, which outreaches LM Wind ...

The latest turbine generation from Siemens has a six megawatt capacity with 75 meter long blades, for a rotor diameter of 154 meters. The rotor has a swept area of 18,600 square meters ...

The power generation blades are 75 meters long

Siemens' 75 m long B75 Quantum Blade incorporates intelligent design and low weight that can have a correspondingly positive effect on power generation costs for wind energy

The Jinyang Wind Farm under the Three Gorges Jinyang Wind Power Project, the biggest wind power project in southwest China, is located in the Daliangshan Mountains, which are ...
