

Turbocharged wind turbine

Our technology introduces the innovative concept of capturability, that is the capacity to capture wind power over a period of time.

Tumurly® Turbo5000 is an extremely durable and efficient wind turbine of the latest generation. The generator body is equipped with aluminium cooling fans. The maintenance-free sliding contact ...

Since year 2018, TURBOWINDS SA/NV is no longer active. The manufacturer was taken over by DS-wind. The rated power of TURBOWINDS T400-34 is 400,00 kW. At a wind speed of 3 m/s, the wind ...

There are two primary types of wind turbines used in implementation of wind energy systems: horizontal-axis wind turbines (HAWTs) and vertical-axis wind turbines (VAWTs).

In this article, we will explore how RAETTS turbo blowers can support renewable energy systems and contribute to a more sustainable energy future.

*Blades using new art of precision injection molding, matched with optimized aerodynamic shape and structure, which enhance the wind energy utilization and annual output. *Body of casting aluminum ...

Tumurly® Titan Series Wind Turbines are being manufactured to high standards in Turkey and are being sold worldwide. With its durable structure, production efficiency and automatic charging / braking ...

Wind turbines have emerged as a pivotal component in the realm of turbo machinery, playing a crucial role in the global transition towards renewable energy sources.
