

# Turkey reduced carbon emissions

Energy is responsible for the majority of climate change-causing greenhouse gas emissions, mostly from the burning of fossil fuels. Despite efforts to reduce these emissions, the trajectory of CO2 emissions ...

Turkey is addressing these challenges by investing in electric vehicles, renewable energy systems, and battery technologies, making significant strides in energy production from clean ...

In October 2021, Türkiye ratified the Paris Agreement on climate and pledged to achieve net zero carbon emissions by 2053. To support Türkiye's climate action, a Memorandum of Understanding (MoU) ...

Within the scope of the Law, reduction of greenhouse gas emissions and adaptation to climate change are among the main targets. In line with the mitigation targets, measures are ...

Türkiye's revised NDC commits to a 41% reduction in greenhouse gas emissions by 2030 (695 Mt CO2e in year 2030), compared to business-as-usual. The country intends to peak its emissions in 2038 at ...

Turkey pledged net-zero emissions by 2053 under the Paris Agreement. Istanbul, its largest city, aims to be carbon-neutral by 2050. To accomplish this goal, the first step involves ...

Türkiye's journey to net zero could bring significant change to the country's economy, presenting challenges yet revealing new opportunities, such as reducing trade deficit and reliance on ...

To substantiate its commitment to reaching net zero emissions by 2053, Türkiye will need to strengthen its emissions reduction target for 2030, submit a new NDC target for 2035 in line with 1.5°C, develop ...

Türkiye's latest data confirms a continued rise in greenhouse gas emissions, despite recent advancements in renewable energy capacity.

Türkiye is targeting a 41% cut in greenhouse gas emissions, compared to a business-as-usual scenario, by 2030. This should see the country's emissions peaking in 2038. Much steeper cuts will be needed ...
