

By expanding its solar capacity, Uruguay is not just meeting its domestic energy needs; it is cementing its leadership in the global shift towards a sustainable and clean energy future.

Can he do it again? Ramón Méndez Galain helped Uruguay decarbonize its grid in just five years, with 98 percent of its energy coming from renewable sources.

To ensure this mix remains as clean as possible in the face of growing electricity demand, the next phase of Uruguay's energy transition is about to begin: major solar expansion.

With an electricity mix fed by approximately 94% renewable sources, Uruguay is already a decarbonisation pioneer. But while 46% of those sources are hydropower, 27% comes from the wind ...

Wind farms sprouted across the Pampas, Uruguay modernized hydropower dams, and solar energy began feeding the grid, with significant potential for further scaling up of photovoltaic ...

Uruguay is boosting its solar capacity with a new 25 MW solar park in San Jos& #233; and a \$100 million investment in solar projects by 2027. Additionally, UTE plans a 75 MW park in Cerro Largo. ...

Held up as a case study for successfully transitioning away from fossil fuels, Uruguay now generates up to 98% of its electricity from renewable energy. The country offers lessons in ...

Today, Uruguay produces nearly 99% of its electricity from renewable sources, with only a small fraction--roughly 1%-3%--coming from flexible thermal plants, such as those powered by ...

These first calls were largely unsuccessful; major multinational wind and solar power firms, busy with lucrative projects in wealthier nations, showed little interest in Uruguay.
