

Vortex bladeless wind turbine scam

For those not wishing to click, it's a new kind of wind turbine that doesn't have a blade. It's just a stick. According to the wired article, they are 30% less efficient than common wind turbines, but ...

Startup technology Vortex wind power for on-site generation, the low-cost wind turbine which is not a turbine!

Vortex Bladeless is attempting to produce a wind turbine that isn't actually a turbine. All generators require a magnetic field, a conductor and motion to produce electricity.

The Vortex Bladeless Wind Turbine has not received, nor even filed an application for independent review by the SWCC. That turbine technology is far from commercial development.

Startup Vortex Bladeless makes a turbine that looks intriguing, but it may not solve wind power's challenges. Wind power has become a legitimate source of energy over the past few decades...

What he makes in the video uses the same concept as Vortex - oscillation wind harvesting. I've been following Vortex with enthusiasm for quite a few years, but am alarmed at the lack of ...

This video looks at the current-state of bladeless wind turbine technology, and predicts future-state. Other videos on the topic which I found interesting..

Vortex Bladeless is attracting that notice because of its new bladeless wind turbine design, which the company claims is quieter, cheaper, and more efficient than conventional wind ...

But buyer beware. This is a computer generated image of the Vortex Bladeless Wind Turbines. An unskeptical eye could believe these turbines are ready for offshore installation - when ...

Bladeless wind turbines harness wind energy through a phenomenon called vortex shedding. When wind flows around the turbine's structure, it creates a cyclical pattern of vortices.
