

# What happened to the photovoltaic products

SunPower Corporation filed for bankruptcy on August 5, 2024 and began the process of selling its assets.

US solar boomed in Q1 2025, but new tariffs and House-passed tax credit cuts threaten jobs, factories, and energy security.

Though solar represented just 3.4% of the nation's electricity generation in 2022, studies show that rooftop solar could eventually meet residential electricity demand in many states if deployed...

The Solar Energy Industries Association (SEIA) said over 65% of the cost to install residential solar is related to soft costs like paying sales teams, securing permits, grid connection ...

With the perovskite-based PV technologies having seemingly been on the cusp of commercialisation for some years now, this is a potentially significant moment for the industry.

However, 2024 has brought immense challenges, with higher interest rates, tighter financing, and adverse policy shifts in key states contributing to over 100 solar bankruptcies based ...

After several years of 30 percent annual growth in installations, 2024 saw a decline: fewer panels were installed in many markets, and companies' valuations declined. This led to large capital ...

In 2025 alone, several major solar companies are going out of business, even as demand for clean energy rises. Homeowners increasingly face unsupported systems, voided warranties, and ...

U.S. residential solar companies are preparing for a steep drop in business this year after the expiration of a federal tax credit that helped drive more than a decade of rapid growth, prompting...

At the same time, between 2022 and 2025, a wave of bankruptcies and solar companies going out of business occurred in the United States. The solar industry was heavily affected by a ...
