What is a good starting wind speed for a generator?

**Startup Wind Speed:** Generators with a low starting wind speed ( $<3$  m/s) can produce power in lighter wind conditions, maximizing operation time. **Generator Type:** Permanent magnet synchronous generators are durable and efficient, while coreless PMGs offer lower torque resistance and smoother start-up.

How do I choose a generator?

**Power Output and Voltage:** Match the generator's wattage and voltage rating with your energy consumption requirements and system voltage (commonly 12V or 24V in residential setups). **Startup Wind Speed:** Generators with a low starting wind speed ( $<3$  m/s) can produce power in lighter wind conditions, maximizing operation time.

Can synchronous generator be used in wind mill?

A synchronous generator cannot be used in a wind mill when the prime mover's speed varies. However, an induction generator can be used, as the frequency of the induced emf is the same as the supply frequency, regardless of the rotor speed, which should be greater than the synchronous speed ( $N_s$ ).
