

# Why solar power generation is a loss-making business

Although solar energy consumption continues to grow, much of the solar energy market suffered from layoffs, lack of profits and industry turmoil throughout 2024. And more solar industry job ...

Enormous subsidies for solar and wind generation technologies are proving much more expensive than advertised. They also carry hidden costs and burdens on the grid, most recently seen ...

Summary. Solar energy is a rapidly growing market, which should be good news for the environment. Unfortunately there's a catch.

To take it from recent headlines, it seems as though the global solar-power industry, following half a decade of record growth and governmental investment, flew just a bit too close to the...

Declines in residential solar markets have been a hit to the industry--but its foundation is strong. We look at why the future is still bright for solar.

So why are some solar companies going out of business while others are succeeding? For some, it has been a combination of factors. Changes to net metering in some states, combined ...

In the last 12 months, California's solar farms have curtailed production of more than 3 million megawatt-hours of solar energy, either on the orders of the state's grid operator or because ...

On this week's Zero, Akshat Rathi talks to Jenny Chase, a solar analyst with clean energy research group BloombergNEF, about the industry's boom-bust cycle, what companies like Qcells ...

When investing in solar, maximizing production is a common goal. Aurora Solar, a leading solar design and performance software provider, released a guide for understanding the leading ...

In summation, solar power generation faces numerous challenges, including significant initial costs, geographic limitations, weather variability, energy storage issues, infrastructural ...
