Due to a lack of obstacles out at sea versus on land, higher wind speeds tend to be observed out at sea, which increases the amount of power that can be generated per wind turbine. Offshore wind farms are also less controversial than those on land, as they have less impact on people and the landsc...

Offshore wind turbines can be built farther from residential areas, reducing visual and acoustic impacts, and can be placed in zones that avoid critical bird migration corridors or ...

Most offshore wind farms employ fixed-foundation wind turbines in relatively shallow water. Floating wind turbines for deeper waters are in an earlier phase of development and deployment. As of 2022, the ...
